## What Is Claimed Is:

5

10

15

- 1. A process for synthesizing substantially enantiomerically pure 4-methylene-L-glutamic acid and analogs thereof, said process comprising the steps of:
  - a. providing a (2S)-pyroglutamic acid or a derivative thereof as a starting material;
  - b. converting the starting material to a 4-enamine derivative thereof;
  - c. hydrolyzing the 4-enamine derivative to a 4-hydroxymethylidene derivative thereof; and
  - d. reducing the 4-hydroxymethylidene derivative to a 4-methylene derivative of pyroglutamic acid or an ester thereof;
  - e. reacting the 4-methylene pyroglutamic acid with a strong base to form linear 4-methylene glutamic acid, or esters and salts thereof.
- 2. The process of Claim 1 wherein step b includes reacting the starting material with an amide or an acetal.
- 3. The process of Claim 2 wherein step b includes reacting the starting material with an acetal at a temperature ranging from 70 C to 130 C.
- 4. The process of Claim 1 wherein step c includes reacting the 4-enamine derivative with a strong acid.
- 5. The process of Claim 1 wherein step d includes reacting the 4-hydroxymethylidene derivative with a carbonate salt.
  - 6. The process of Claim 1 wherein the strong base is lithium hydroxide.
  - 7. The process of Claim 3 wherein the temperature ranges is from 105 C to 115 C.
